

# Premier Inns, Southern England

Main Contractor: 360 Engineering Ltd

Project Value: circa £3.5m

In 2008 Whitbread the owners of Premier Inn embarked on a trial to retro fit air conditioning to the bedrooms of a number of Premier Inn locations. Having established a good working relationship with the professional team, 360 Engineering were appointed to design & build turnkey solutions for 11 hotels, comprising over 1000 bedrooms in total.

Acting as main contractor we designed, managed, built & delivered new mains supplies, mechanical requirement & all associated builders' & decorating works. We even went so far as to design & fit the Premier Inn logo to each AC room controller in line with their aesthetic requirement.

Each hotel was fully operational; therefore we devised & managed a programme to take a section of rooms for 7-12 days returning back for hotel completed & ready for sale.

This entire programme of works was executed within 8 months to meet Whitbread's strict target. Having delivered all of our hotels on budget & on programme, the trial was judged a success.
