

In 2015 we proudly completed our 4<sup>th</sup> consecutive year of working for Sainsbury's within their Facility Management replacement program. Stores' HVAC Systems are surveyed by 360 Engineering & items identified as beyond economical repair are subject to redesign with supporting data showing energy use reduction & improved performance & ultimate payback period being provided alongside the remedial design.

360 Engineering carry out the full design process & present to the Engineering Team for discussion, development & ultimately approval. 360 Engineering then operate as the Main Contractor to deliver the remedial works.

360 Engineering maintain accountability via Sainsbury's in house BIW (network) reporting system.

**360's 2014/2015 Program of Works:**
